Implementing CRM For Result Tracking Of A Candidate With Internal Marks - (ADMIN)

The project aim is to provide real-time knowledge for all the students who have basic knowledge of Salesforce and Looking for a real-time project. This project will also help to those professionals who are in cross-technology and wanted to switch to Salesforce with the help of this project they will gain knowledge and can include into their resume as well.

What you'll learn

Real Time Salesforce Project
Object & Relationship in Salesforce

Create Salesforce Org

Introduction

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don't know where you should start on your learning journey? If you've answered yes to any of these questions, then you're in the right place. This module is for you.

Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity- boosting features, that will help you sell smarter and faster. As you work toward your badge for

this module, we'll take you through these features and answer the question, "What is Salesforce, anyway?"

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers.

Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud.

So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:

Creating Developer Org

Creating a developer org in salesforce.

1. Go to developers.salesforce.com/Signup
2. Click on sign up.
3. On the sign-up form, enter the following details:
    1. First name & Last name
    2. Email
    3. Role: Developer
    4. Company: College Name
    5. County: India
    6. Postal Code: pin code
    7. Username: should be a combination of your name and company
    This need not be an actual email id, you can give
    anything in the format: username@organization.com

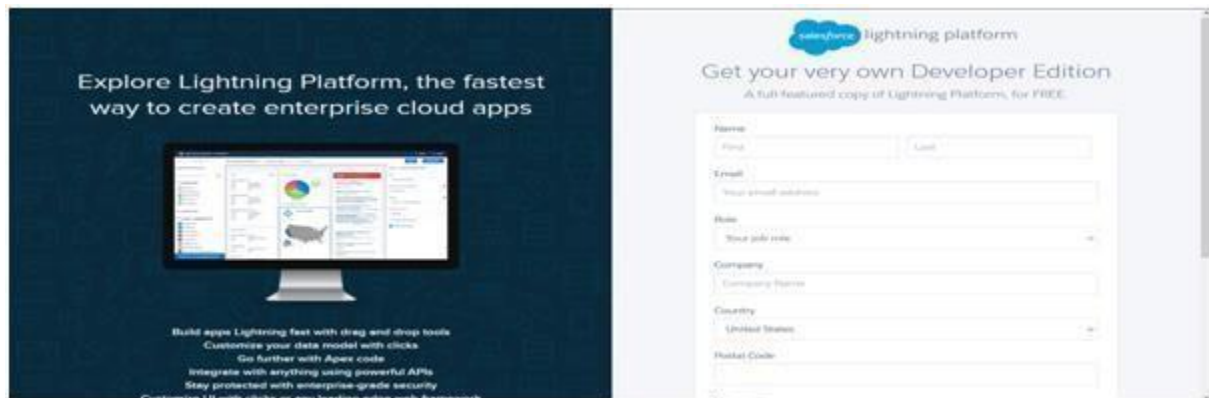

Click on sign up after filling these.

Object

Salesforce objects are database tables that permit you to store data that is specific to an organization.Salesforce objects are of two types:

1. Standard Objects: Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.

2. Custom Objects: Custom objects are those objects that are created by users. They supply information that is unique and essential to their organization. They are the heart ofany application and provide a structure for sharing data.

Creation Of Semester Tab For Candidate Internal Result Card

Now create a custom tab. Click the Home tab.

1. Enter Tabs in Quick Find and select Tabs.

2. Under Custom Object Tabs, click New.

3. For Object, select Semester.

4. For Tab Style, select any icon.

5. Leave all defaults as is. Click Next, Next, and Save

6. In the same way create Tabs for all Custom Objects -Candidate, Course Details, Lecturer Details, Internal results .
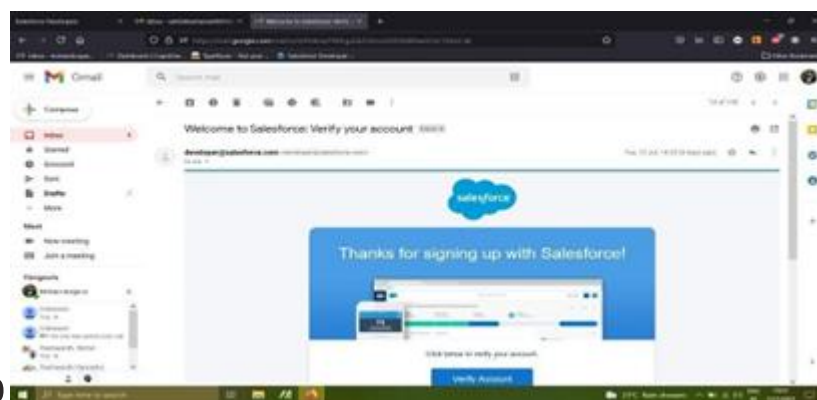

Lightning App

Apps in Salesforce are a group of tabs that help the application function by working together as aunit. It has a name, a logo, and a particular set of tabs. The simplest app usually has just two tabs. There are two types of app –

1. Standard App: Standard apps come with every occurrence of Salesforce as default. Many features like Sales, Marketing, Community, call center, content, Salesforce chatter, App Launcher, etc are present in it.

Note: The description, Logo, and Label of standard app cannot be altered.

2. Custom Apps: Custom apps are created according to need of user. Custom Apps are made by using standard and custom tabs together.
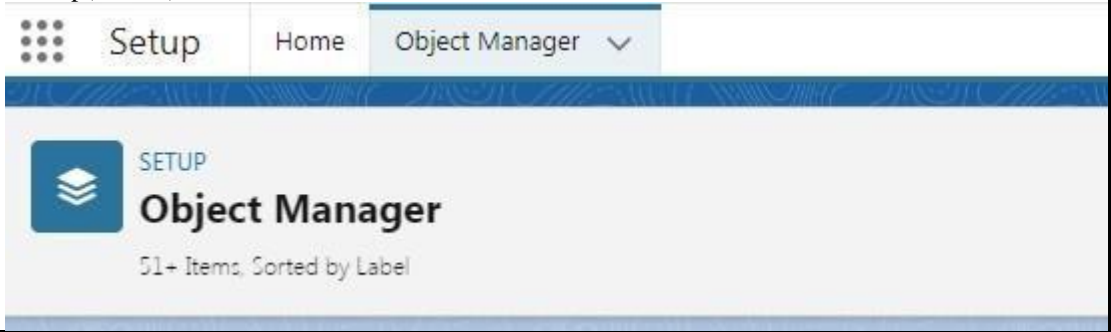

Note: Logos for Custom Apps can be changed.

Fields And Relationship

Fields - Fields store data values that are required for a particular object in a record.

An object relationship in Salesforce is a two-way association between two objects. Relationships are created by creating custom relationship fields on an object. This is done so thatwhen users view records, they can also see and access related data.

Object Name	Field Name	Data type
Semester	Semester Name	Text(Standard field)
	Course	Lookup(Course Details)
Candidate	Candidate Name	Text(Standard field)
	Candidate Roll Nu	Auto Number

	mber	
	Semester Name	Lookup(Semester)
Lecturer Details	Lecturer Name	Text(Standard field)
	Lecturer Role	Text
	Course	Lookup(Course)
Course Details	Course Name	Text(Standard field)
	Duration (Years)	Number

Internal results	Candidate	Lookup (candidate)
	Candidate Roll Number	Formula
	Course	Lookup(Course)
	Marks	Number

Create The Candidate Internal Result Card App

1. From Setup, enter App Manager in the Quick Find and select App Manager.

2. Click New Lightning App.

3. Enter **Candidate Internal Result Card** as the App Name, then click next

4. Under App Options, leave the default selections and click next.

5. Under Utility Items, leave as is and click Next.

7. Click Next.

From Available Profiles, select System Administrator and move it to Selected Profiles. Click Save & Finish.
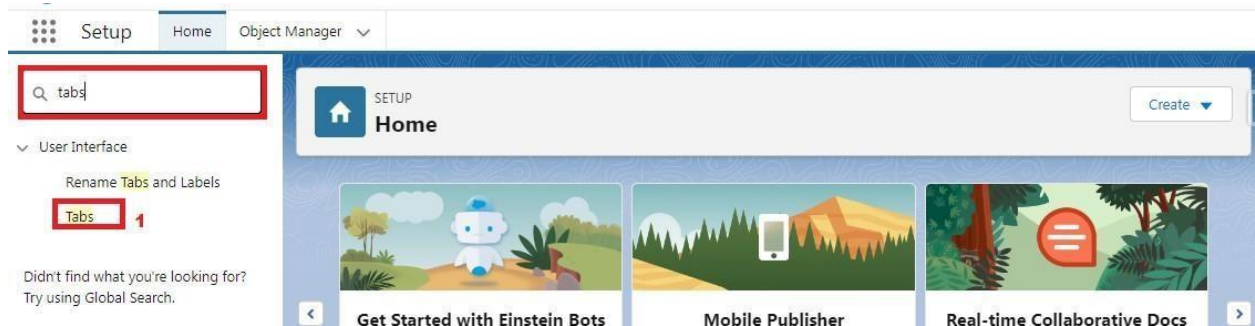

Users

A user is anyone who logs in to Salesforce. Users are employees atyour company, such as sales reps, managers, and IT specialists, whoneed access to the company's records. Every user in Salesforce has auser account.

Creating A User

1. From Setup, in the Quick Find box, enter Users.

2. Select Users.

3. Click New User.

4. Enter the First Name, Class, Last Name, Teacher and (Your) email address anda unique username in the form of an email address. By default, the username is the same as the email address.

5. Select a User License as salesforce.

NOTE- As Salesforce license can only be used by 2 Users at a time in Dev Org, so If you don't find salesforce license then deactivate a user who has salesforce license Or change the license type from Salesforce to any other.

6. Select a profile as Standard user.

7. Check Generate new password and notify the user immediately to have the user's login name and a temporary password emailed to your email.

User Adoption

Salesforce user adoption is the simple act of enabling a user to use SFDC's full CRM capabilities by creating strategies around onboarding, training, and continued development – all to drive overall digital adoption.

Delete Record (Course Details)

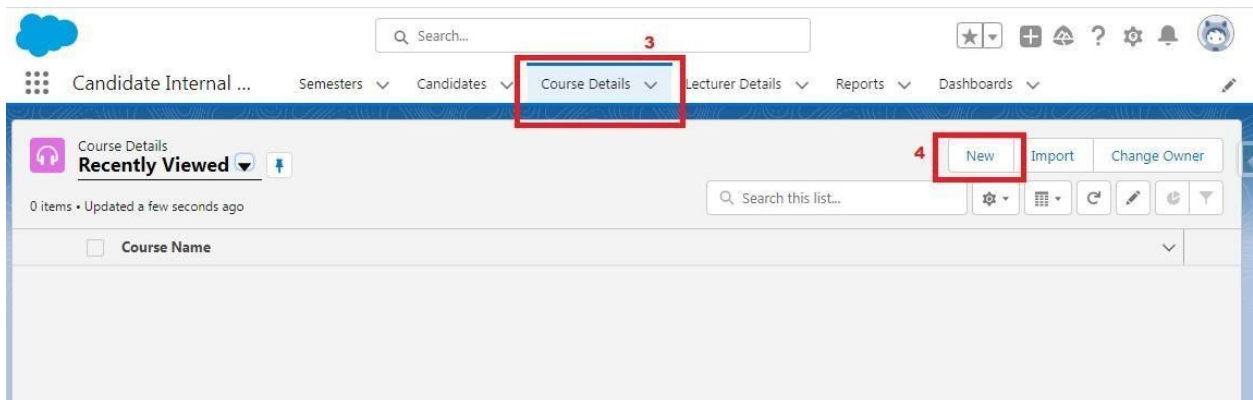

Deleting Records of Course Details Object

1. Click on App Launcher on left side of screen.

2. Search Candidate Internal Result Card & click on it.

3. Click on Course details Tab.

4. Click on Arrow at right hand side on that Particular record.

5. Click delete and delete again.

What Are Reports?

Reports in Salesforce is a list of records that meet a particular criterion which gives an answerto a particular question. These records are displayed as a table that can be filtered or grouped based on any field.

There are 4 types of report formats in Salesforce:

Tabular Reports:

This is the most basic report format. It just displays the row of records in a table with a grand total. While easy to set up they can't be used to create groups of data or charts and also cannot beused in Dashboards. They are mainly used to generate a simple list or a list with a grand total.

Summary Reports:

It is the most commonly used type of report. It allows grouping of rows of data, view subtotal,and create charts.

Matrix Report:

It is the most complex report format. Matrix report summarizes information in a grid format. It allows records to be grouped by both columns and rows. It can also be used to generate dashboards. Charts can be added to this type of report.

Joined Reports:

These types of reports let us create different views of data from multiple report types. The data is joined reports are organized in blocks. Each block acts as a sub-report with its own fields, columns, sorting, and filtering. They are used to group and show data from multiple report types in different views.

Report types:

Report type determines which set of records will be available in a report. Every report is based on a particular report type. The report type is selected first when we create a report. Every reporttype has a

primary object and one or more related objects. All these objects must be linked together either directly or indirectly.

A report type cannot include more than 4 objects. Once a report is created its report type cannot be changed.

There are 2 types of report types:

Standard Report Types: Standard Report Types are automatically included with standard objects and also with customobjects where "Allow Reports" is checked. Standard report types cannot be customized and automatically include standard and custom fields for each object within the report type. Standard report types get created when an object iscreated, also when a relationship is created.

Note: Standard report types always have inner joins.

Custom Report Types: Custom report types are reporting templates created to streamline the reporting process. Custom Reports are created by an administrator or User with "Manage Custom Report Types" permission. Custom report types are created when standard report types cannot specify which records will be available on reports.

In custom report types we can specify objects which will be available in a particular report.

The primary object must have a relationship with other objects present in a report type either directly or indirectly.

There are 3 types of access levels of folders:

Viewer: With this access level, users can see the data in a report but cannot make any changes except cloning it into a new report.

Editor: With this access level, users can view and modify the reports it contains and can also move themto/from any other folders they have access level as Editor or Manager.

Manager: With this access level, users can do everything Viewers & Editors can do, plus they can alsocontrol other user's access levels to this folder. Also, users with Manager Access levels can delete the report.
